

Document Destruction & Recycling

Local Councils are encouraging us to recycle more but theft of confidential information is on the rise. How do you ensure that confidential material does not fall into the wrong hands whilst being environmentally friendly at a reasonable price?

Rapide's confidential recycling service may be the perfect answer.

We can supply sacks, wheelie bins, 1100 litre Euro bins, office consoles and now our new under-desk consoles.

These consoles are small enough to fit under your desk and can be used for all paper waste. We can treat **all** your waste as confidential and ensure that it is securely shredded before being recycled. Once the bag inside the console is full, it is sealed with a unique security tag which includes a barcode that allows us to track it until it is destroyed and issue you with a certificate of destruction.

Our in-house document shredding and recycling service means that you can be secure in the knowledge that vital information held by your organisation or in our secure storage does not fall into the wrong hands.

All materials are controlled via a barcode system with multiple checks to ensure that only items due for destruction are destroyed. A full audit history is available for every item and certificates of destruction produced for every batch destroyed.

All confidential material is shredded to make it unreadable and then sent for environmentally friendly recycling.

Highly competitive pricing means that Rapide's confidential destruction and recycling services can be used for all your waste paper ensuring that vital information does not fall into the wrong hands.*

It takes 6 mature trees to make one tonne of paper. Reduce your carbon footprint by recycling your office paper with Rapide.
